Subject: Re: phone stuff

Sweet. You and me, buddy. We'll make this happen.

I am open to Nokia and Sony/Erricsson. SE might be a better fit.

Hey man you made my day!!!!

I dont care what little shit I start doing here in Boston, Android is and will remain my #1 priority and motivation here at Google.

I am making good progress and WILL get Red Hat and Nuance to close and join the alliance.

I am picking up things with Open office guys on SVG, (should we see if they have a PDF player as well?).

I have NMS coming in tomorrow and they are looking to join the alliance and contribute an IMS client stack.

I am sure we can get Openwave to join as well I will continue to push that.

I am working w/Nick today on a term sheet for Cingular to keep them warm and see if they are in the game before we cave for T-Mobile and give up exclusivity for an open platform.

We need to pick things up w/Telecom Italia to keep them warm as well.

I have one more WAKY IDEA -> Maybe its time to get in best w/Nokia. They want Linux and they are shut out of the other alliance. We could do a power share with them, we control the app framework and core and they can do all the telephony stuff... They are the market leader.

Give up? Me?

Never.

This stuff is really important.

I'm on it. Esmertec has a term sheet in hand and is flying here next week. They have VM, libs, WAP and MMS.

Never fear -- we are both industry guys and know how important this stuff is. We can't do a "ta da!" with a sub-standard platform.

That's not called a ta-da, it's an "oh no!".
